

FREE

SplitView for ALL LMX200's

SplitView is the latest new feature available today and it's FREE for any current LMX200 customer.

SplitView combines the benefits of LineView and MapView onto one one screen. The MapView side of the screen shows all the GPR data that has been collected and where the LMX200 is currently located in the survey area while the LineView side displays your cross-section data to quickly see the spatial relationship between targets and determine if a series of hyperbolas are in linear orientation.

MapView display is powerful and meaningful and provides a bird's eye view of your site map with survey path, depth slices, field interpretations, flags and collected lines in MapView.

MapView layers toggle on and off multiple layers to optimize your view to generate a more complete picture of your full site and capture in screenshots to augment your reports right from the display unit.
